## Description

In the title compound, C8H10NO2+·NO3-, there are two crystallographically independent cations and two anions, the pairs being related by a pseudo-inversion centre at approximately (0, {1 \over 4}, {1 \over 4}). The phenylglycinium cations and nitrate anions are linked to each other through strong N—H···O and O—H···O hydrogen bonds, forming a three-dimensional complex network.
